EDUCATION BACKGROUND

Anhui University of Finance & Economics

09/2020-06/2024

◆ School of Management Science and Engineering

◆ Major: Information Management and Information Systems

◆ GPA: 4.0/5.0 (88.5/100)

◆ Awards:

Social Work Scholarship & Personal Comprehensive Competence Scholarship & Sports Scholarship

Honorable Mention (Top 20%), 2024 Second International Mathematics Modeling Contest for Higher Education

Academic Excellence Scholarship & Social Practice Scholarship

Provincial Third Prize, China College Students' E-commerce Innovation, Creativity and Entrepreneurship Challenge Competition

Merit Student

EMPLOYMENT EXPERIENCE

System Operations Engineer (AI&DevOps), China UnionPay - UnionPay Advisors (Shanghai) Co.,

Ltd. (Full-time)

07/2024-Present

Project Leader & Core Developer, Company's 3-Year Strategic Planning Key Projects: Intelligent SLA Ticket System

(01/2026-Present)

- ◆ Developed an intelligent SLA ticket system using Vue3 and Gin, unified multi-business ticket data, and standardized service workflows.
- ◆ Built an intelligent analysis engine by integrating with the internal AI foundation, and implemented automatic ticket classification, priority determination, intelligent Q&A, and anomaly alerting, while developing a multi-dimensional SLA scoring algorithm to quantify service quality.
- ◆ Developed a data visualization dashboard to automate report generation and periodic push, replacing manual statistics and improving the fine-grained management of technical services.

Core Developer, Company-Level AI Strategic Project: UnionPay AI Operations Management System (03/2025-Present)

- ◆ Built a large-model service foundation from scratch, deployed, optimized, and iterated over 10 mainstream models, and optimized inference performance using the vLLM framework.
- ◆ Self-developed a one-stop AI operations platform based on a multi-tech stack (FastAPI, LangChain, etc.), and implemented unified management of agents, models, permissions, sessions, tools, and knowledge bases using a multi-agent architecture.
- ◆ Integrated cloud computing and cloud-native architectures, and improved system concurrency and availability through algorithm optimization, asynchronous interfaces, and database read-write separation.
- ◆ Connected various operations systems via the MCP protocol, and achieved full-process automated operations in test environments.

Core Engineer, Government-Enterprise-Finance Collaborative AI Strategic Cooperation Project: Intelligent Operations Management and Inspection System for Bank Card Account Opening Platforms (09/2025-02/2026)

- ◆ Led the design of the cross-network operations architecture, planned VPC and security group policies, resolved cross-network permission conflicts, and ensured secure data transmission.
- ◆ Built automated operations tools using Python, Shell, and Ansible, and established a full-process automated release and monitoring system.
- ◆ Developed MCP operations services based on the FastAPI framework, integrated them with the AI operations platform, and built an inspection agent to automate scheduled system inspections and intelligent anomaly alerting, reducing manual inspection time from 2-3 hours to fully automated agent execution.

AI Resource Engineer, iFLYTEK Co., Ltd. (Internship)

04/2024-06/2024

AI-Powered Legal System Construction Project

- ◆ Preprocessed low-quality legal scanned documents using Python OpenCV, connected to the internal OCR platform to build a batch recognition pipeline, and processed over 500 documents per day on average.
- ◆ Designed prompt templates to call a 7B model for legal term standardization, redundancy filtering, and privacy anonymization, and improved the effective data pass rate from 65% to 80%.
- ◆ Analyzed corpus quality distribution using TF-IDF, screened high-frequency legal entities and case categories, and constructed tens of thousands of SFT fine-tuning samples in the "instruction-input-output" format for delivery to the algorithm team.

RESEARCH & COMPETITION

Leader, Alibaba Cloud Tianchi Big Data Competition: LLM-Generated Text Detection and Identification Based on NLP Technology

03/2025-04/2025

Yanqi WANG

Personal Website: <https://yanqi-wang.com>

Personal GitHub Homepage: <https://github.com/ADW-19>

Result: Ranked 71st (Top 7%) | Tech Stack: Python, Pandas, Scikit-learn, PyTorch, Transformers, NumPy

- ◆ Designed an ensemble learning framework integrating XGBoost and LightGBM, and trained base learners with K-fold cross-validation to improve generalization.
- ◆ Fine-tuned Qwen2.5-7B with LoRA using labeled competition data, and incorporated expert model assistance to enhance identification of high-quality generated text.
- ◆ Built a comprehensive feature engineering pipeline, extracting statistical features including perplexity, syntactic complexity, and lexical diversity, combined with TF-IDF vectorization.
- ◆ Achieved an AUC of 0.77 on the unseen test set, validating the effectiveness of the ensemble framework with semantic feature augmentation.

Leader, **National College Students Data Statistics and Analysis Competition: Research on Accurate Prediction of Bank Card Fraud Risk Based on Decision Tree and Other Models** 05/2024-06/2024

Result: Ranked 2nd (Top 10%) | Tech Stack: Python, Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn, Statsmodels

- ◆ Cleaned and validated 1 million records using Pandas, and plotted fraud distribution pie charts and online-offline channel bar charts with Matplotlib and Seaborn.
- ◆ Applied Spearman correlation heatmaps and logistic regression for dual-dimension feature validation, and quantified through Naïve Bayes that PIN verification reduces fraud probability from 11.02% to below 1%.
- ◆ Built a CART decision tree model with Scikit-learn, standardized continuous variables using StandardScaler, set max_depth=4 to prevent overfitting, and achieved a 5-fold cross-validation accuracy of 99.24%.
- ◆ Authored a specialized research report based on model results, and provided targeted anti-fraud recommendations for public security agencies, commercial banks, and general users.

Core Member, **National-Level College Students' Innovative Entrepreneurial Training Plan**

08/2021-10/2022

Program: Hexia - New Agricultural Product Sales Platform

- ◆ Led the overall backend framework construction, designed database schemas based on ORM, and designed and implemented RESTful APIs with Django REST Framework to cover core modules including product management, group-buying configuration, and user authentication.
- ◆ Built an operations management dashboard using Vue2 and Element UI, and implemented frontend interfaces for product publishing, group-buying configuration, order management, and user management.
- ◆ Constructed a C-side mini-program demo using a low-code platform, configured homepage product displays, group-buy detail pages, and a simulated order flow to meet competition presentation requirements.
- ◆ Authored project technical documentation independently, including system functional and design documents and related diagrams, and submitted them as the technical section of the project review report.

STUDENT WORK

Soccer Club Leader & Volunteer & Class Monitor

09/2020-06/2024

SKILLS & CERTIFICATE

- ◆ **English:** IELTS: Overall: 6.5 (Listening: 7.0; Reading: 7.0; Writing: 6.0; Speaking: 6.0)
- ◆ **Computer:**
 - Languages: Python, Golang, SQL, C, JavaScript
 - AI & Machine Learning: Scikit-learn, NumPy, PyTorch, vLLM, LangChain, LangGraph
 - OS: Linux (CentOS, Ubuntu), Windows
 - Framework: FastAPI, Gin, Django, Flask
 - Tools: Git, Docker, Ansible, Grafana
 - Middleware: Nginx, Redis, Elasticsearch, RabbitMQ
 - DB: MySQL, MongoDB, PostgreSQL, Milvus
 - Research: LaTeX, MS Office
- ◆ **Certificate:**
 - IBM Data Science Professional Certificate
 - Business Data Analyst Level Three
 - Ministry of Industry and Information Technology Professional Knowledge Assessment – Mathematical Modeling Certificate
